

What is MSV Cloud ?

In a hyper connected society that never sleeps, cloud IT solutions empower your business and its people to operate 24/7 from any device, located anywhere in the world.

Using an Internet connection, remotely communicate with colleagues and access files, software and web-based applications stored in the 'virtual cloud'. Continuous business operation and scalable growth is cost-effective and easily achievable with cloud applications and storage features.

Eliminate the need and cost to own, power, cool or service expensive equipment and simplify your business with cloud-based IT solutions.

IT Services You Can Trust

Remove the need for costly equipment, updates, repairs and maintenance by using desktop as a service. Connect existing devices or 'thin client' screens to access your entire business database, applications and communications within a powerful UK based data centre. Plug-in, switch on and dial in from anywhere in the world to a real-time desktop securely, quickly and inexpensively.

Consolidate everything in one place and store it safely in a UK based data centre with enterprise level security. The cloud offers an unlimited amount of storage and the ability to upgrade and downgrade space depending on the needs of the business. With secure access and a flexible pricing structure, files and applications can be retrieved from anywhere in the world around the clock.

Office 365 is a familiar business application and offers a suite of software, storage and communication capabilities. The use of Office 365 depends on the business needs – options include desktop packages, email exchange and OneDrive data storage. Software usage can be tailored to accommodate the number of users and select only the individual applications required. Full backup and security is provided to maintain complete peace of mind.

Cloud PBX is telephone communication hosted within the cloud that negates the need for a fixed landline. Numbers can be deployed from any location and users can communicate worldwide simply by plugging a compatible phone into a data socket or dialling from a connected computer. Cloud PBX enables fast communication and optimal productivity at an affordable price.

Application hosting enables the secure access to, and the use of, software from within the cloud from any compatible device, at any time and from anywhere. With automatic updates and monthly fixed billing the worry of outdated software and incompatibility issues is eradicated. Application hosting is the easy answer to the safe use and protection of business-critical software.

Backup is a business-critical process that ensures the security of any business and its data. The increase of cyber crime and the associated risks of viruses, spam email and phishing content makes all electronic and online users – and their equipment – vulnerable. Reliable backup not only guards against human error but also helps with business continuity and disaster recovery should the worst happen.
